Fusion

Open the Preferences dialog by selecting **File > Preferences...** from the menu bar. In the Preferences dialog, navigate to **Environment > Fusion** to configure settings that control how information is displayed within the Fusion panel.

General

Default Colors	You can customize the color of newly created Fusion nodes displayed in the Fusion panel. Changing the default color does **not** affect nodes that have already been created. However, the updated color will be applied to existing nodes in the Fusion diagram if the user selects "Restore Default Header Color" from the context menu.
Grid Enabled	When this option is enabled, a grid is displayed in the Fusion panel, providing visual guidance for aligning and positioning nodes.
Restore Defaults	Clicking the **Restore defaults** button resets all settings in this section to their original default values.
