TextStyle

Adds a new text style to the solution. The `Style` property of a 2D Text Node and the `TextStyle` property of controls such as the text control and the text button control reference this text style.

Item	Description
Destination path	Specifies the folder in the solution where the system places the new item. Click **Browse...** to select an existing folder.

Item	Description
Replacement Character	Specifies the character that the system uses as a substitute when the requested character is not available in the font. The default value is `U+FFFD`.
Name	Sets the name of the new item.
Description	Describes the new item in detail.
Annotations	Serves as storage for notes and other project-related information. The system exports the entered text to the HMI report.
URI	You can set any URI. If you enter a valid URI, clicking it launches the browser and displays the contents of the link.
Export Always	Specifies whether the system always includes this item as part of the asset.
Base Style	Specifies the base Style. A `GetFont` method call for a code point in a range that is not defined in a StyleEntry is resolved by the base Style specified here. The following are typical styles included in the ConstructionKit (they may differ depending on your environment). • ConstructionKit.ArabicRegularStyle • ConstructionKit.EnglishRegularStyle • ConstructionKit.JapaneseRegularStyle • ConstructionKit.KoreanRegularStyle • ConstructionKit.OpenSans25 / OpenSans35 / OpenSans96 • ConstructionKit.OpenSansRegular25 / OpenSansRegular35 / OpenSansRegular96 • ConstructionKit.Roll Lens • ConstructionKit.SimplifiedChineseRegularStyle • ConstructionKit.ThaiRegularStyle • ConstructionKit.Vera25 / Vera32 / Vera96
Default Font	Specifies the default font by path. When no base Style is defined, the `GetFont` method retrieves the default font specified here for code points that do not fall within any range defined in StyleEntry. Click the browse button on the right to select a font.
